

PRESS RELEASE

IGE+XAO announces the integration of SEE Electrical Expert with the Prosyst offer.

Hannover – April 26, 2016

The IGE+XAO Group (80% shareholder of Prosyst capital for the last 2 years) announces the integration of SEE Electrical Expert with Prosyst packages ODIL and SIMAC.

ODIL, which is deployed at PSA and Renault Groups, is a fully customizable software workbench for automation studies used to generate documentation, PLC programs and HMI (Human to Machine Interface) applications.

SEEtO ODIL, the new SEE Electrical Expert integration software with ODIL, automatically generates SEE Electrical Expert projects from a description of the machine made with ODIL. SEEtO ODIL answers the increasing need for design standardization and automation. It provides significant benefits to all parties involved in a project:

- For OEM and integrators, it contributes to design process optimization as well as quality level improvements.
- For contractors, it enables design cost and lead-times reduction.

SIMAC is a machine or process simulator that creates virtual facilities and models the actual control systems architecture. SEEtO SIMAC enables the importing of electrical infrastructure, previously defined in SEE Electrical Expert, to be exported to SIMAC. This contributes to a 50% time saving in modelling and avoids errors due to several manual data entries.

For Alain Di Crescenzo, Chairman and CEO of the IGE+XAO Group “These integrations will allow our clients to benefit from all the power of our unique software offer covering the entire electrical installation lifecycle: from functional design to maintenance, including detailed design, PLC programming, simulation, manufacturing, on site commissioning and optimization”.

ABOUT THE IGE+XAO GROUP

For over 30 years, the IGE+XAO Group has been a software publisher designing, producing, selling and supporting a range of Computer Aided Design (CAD), Product Lifecycle Management (PLM) and Simulation software dedicated to Electrical Engineering. These software products have been designed to help manufacturers in the design and maintenance of the electrical part of any type of installation. This type of CAD/PLM/Simulation is called "Electrical CAD/PLM/Simulation". IGE+XAO has built a range of Electrical CAD/PLM/Simulation software designed for all the manufacturers. IGE+XAO employs 388 people around the world at 32 sites and in 21 countries, and has more than 83,000 licenses distributed around the world. IGE+XAO is a reference in its field.
